

TSI SUCCESS STORIES:

SYS-TEK SWITCHES TO TSI

Pictured is Hydronic Manometer HM685

"We're an engineering consulting firm that specializes in system commissioning, which means we travel a lot with our equipment. We used another brand of instruments for years, but they were big and clunky and the cases broke and wouldn't latch, which is not good for flying. We decided to try TSI after seeing someone else using them on a job.

TSI'S HM675 HYDRONIC MANOMETER IS REALLY EASY TO USE - JUST PLUG IT IN AND GET GOING.

It's smaller, the readings continuously update on the display so you don't have to push buttons all the time, and you can see the high side, low side and differential pressure readings simultaneously right on the meter without changing hose connections. The case is great, too; it is padded and the locking mechanisms seem a lot better. We liked the HM675 so much we bought two more, a second for our main office in Kansas City and one for our office in Houston, Texas - and a TSI VelociCalc® Air Meter!

WE'RE ALL ABOUT TSI NOW!"
